

	<u>Page</u>
Pond and Reservoir Maintenance	11-37
Inspection and Repairs	11-37
Sanitation	11-37
<u>PART III - EXCAVATED PONDS</u>	
Types of Excavated Ponds	11-39
Location of Excavated Ponds	11-39
Soils Investigation	11-39
Spillway and Inlet Requirements	11-42
Planning an Excavated Pond	11-43
Shape and Capacity	11-43
Selecting Pond Dimensions	11-44
Estimating the Volume of an Excavated Pond	11-44
Disposal of Waste Material	11-45
Excavated Pond Construction	11-46
<u>PART IV - SEALING PONDS AND RESERVOIRS</u>	
Sealing Methods	11-47
General	11-47
Sealing by Compaction Alone	11-47
Use of Clay Blankets	11-47
Sealing with Bentonite	11-48
Treatment with Chemical Additives	11-49
Use of Flexible Membranes	11-50
<u>PART V - DESIGN OF PRINCIPAL SPILLWAY</u>	
Design	11-61
Design Procedure for Pond or Pipe Structure with Hood Inlet and Detention Storage (using Method I - Minimum Detention Storage)	11-62
Example Design (Pond Drainage Area of 20 Ac or less)	11-64
Example Design (Pond Drainage Area greater than 20 acres)	11-79
Design Procedure for Ponding or Pipe Structure with Hood Inlet, Drop or Flared Inlet and Water Detention (Using Short Cut Flood Routing Method II)	11-99
Example Design - Pond with water detention and drop inlet	11-103
Design Procedure For Pond or Pipe Structure With Hood, Drop or Flared Inlet and Water Detention (Using Method II - Short Cut Flood Routing Start Design at Emergency Spillway Crest)	11-121
Design Procedure For Ponds with NO Principal Spillway with Drainage Area of 10 Acres or Less	11-125
Example Design - Pond with No Principal Spillway and with Drainage Area of 10 Acres or Less	11-127
Sample Construction Specification For A Pond	11-135

PART VI - ESTIMATING SEDIMENT ACCUMULATION
IN PONDS AND SEDIMENT BASINS

11-139

Figures

Figure 11-1	Deepening pond edges by cut and fill method.	11-3
Figure 11-2	Details of dry hydrant installation.	11-5
Figure 11-3	Sample notes for a pond design curve	11-11
Figure 11-4	Soil investigation form.	11-14
Figure 11-5	Profile and cross section of excavated earth spillway.	11-18
Figure 11-6	Profile and cross section of a natural vegetated spillway	11-21
Figure 11-7	Embankment pond equipped with a stock watering facility.	11-23
Figure 11-8	Sample plan of farm pond	11-29
Figure 11-9	Sample profiles of embankment and spillway	11-30
Figure 11-10	Construction layout notes.	11-32
Figure 11-12	Excavated pond and typical sections. Note fenced desilting area above pond.	11-40
Figure 11-13	Cross section of excavated pond showing methods of waste material disposal	11-41
Figure 11-14	Excavated pond fed by ground water	11-42

Tables

Table 11-1	Daily consumption of water by livestock.	11-1
Table 11-2	Capacity guide for small irrigation reservoirs	11-2
Table 11-3	Recommended minimum depths of ponds and reservoirs	11-9
Table 11-4	Recommended top widths for earth embankments	11-25
Table 11-5	Recommended side slopes for earth embankments.	11-25
Table 11-6	Sample volume computations using "sum of end areas" method.	11-27

Exhibits

Exhibit 11-1	Guide for estimating approximate acres of drainage area required per acre-foot of storage in a farm pond	11-52
Exhibit 11-2	Design table for vegetated spillways excavated in erosion resistant soils.	11-53
Exhibit 11-3	Design table for vegetated spillways excavated in very erodible soils.	11-54
Exhibit 11-4	Estimate of principal spillway discharge allowing for temporary storage.	11-55
Exhibit 11-5	Discharge through natural vegetated spillways.	11-56
Exhibit 11-6	End area table for embankment sections for various side slopes and crown widths	11-57
Exhibit 11-7	Diameters of pipe inlets required to discharge various rates of inflow into excavated ponds	11-60
Exhibit 11-10	Estimating sediment accumulation in ponds and sediment basins (worksheet)	11-14
Exhibit IN-11-6	End Area Tables For Earth Embankments.	11-58
